Indiana American Water President Addresses ASCE 2026 Report Card for Indiana's Infrastructure

Calls for Increased Investment in Critical Water and Wastewater Systems

GREENWOOD, Ind., Nov. 12, 2026 /PRNewswire/ -- Barry Suits, president of Indiana American Water, issued the following statement in response to the grade of C- for drinking water and D+ for wastewater in the American Society of Civil Engineers' (ASCE) 2026 Report Card for Indiana's Infrastructure:

"The ASCE 2026 Report Card for Indiana's Infrastructure reinforces the urgent need for investment in critical water and wastewater systems, assigning the state a C- for drinking water and a D+ for wastewater.

The report card underscores the growing infrastructure challenges facing the Hoosier state, including aging assets, lead service line replacement, PFAS treatment requirements, sewer rehabilitation, and treatment plant upgrades. These pressures reinforce the importance of continued, long-term investment in critical water and wastewater infrastructure.

At Indiana American Water, our responsibility is clear: provide safe, clean, reliable and affordable water and wastewater service while investing in the systems that support and sustain the communities we serve. Our experience demonstrates how sustained, professionally managed investment can strengthen water and wastewater systems. Over the past five years, we have invested nearly $1 billion in infrastructure, and we plan to invest another $1 billion-plus planned over the next five years, while continuing to balance reliability, resilience and affordability for customers."
