West Virginia American Water Begins $365,000 Infrastructure Investment in South Charleston

Charleston, W.Va., (Sept. 16, 2024) – West Virginia American Water is pleased to announce a new infrastructure project on Overlook Way in South Charleston. As part of our ongoing commitment to providing safe, reliable water service the company will be investing approximately $365,000 in water main improvements.

This project, which has already begun, includes replacing 620 feet of aging water main. Construction will take place along Overlook Way from Village Drive to the end of the cul-de-sac. These upgrades will improve service reliability for customers, which will help reduce service disruptions.

Crews will work Monday through Friday between 7:00 a.m. and 5:30 p.m. Traffic restrictions will be in place during construction. The company expects to complete the water main replacement and connect all customer service lines to the new main by the end of December and with final street restoration completed after the main replacement work is complete.

This infrastructure upgrade project is part of West Virginia American Water's plan to invest more than $97 million in infrastructure upgrades across the state in 2024. In addition, these projects help support the economic health of the communities served by West Virginia American Water. Economic impact studies show that for every $1 million invested in water infrastructure, upwards of 15 jobs are generated throughout local economies.

Over the past decade, West Virginia American Water has invested over $736 million, in infrastructure projects and capital upgrades to address aging infrastructure across the Mountain State, including more than 168 miles of new water main. To learn more about our ongoing investment in infrastructure, visit the company's interactive upgrade map.

During construction, customers may experience temporary service interruptions, discolored water, and/or lower than normal water pressure. Crews will work as quickly as possible to shorten the length of these temporary inconveniences. To report water related emergencies such as leaks, main breaks or other service disruptions, customers can submit a service request on the company's website.
