West Virginia American Water Invests $580,000 in Fayetteville on Infrastructure Improvements

Fayetteville, W.Va., (Dec. 30, 2024) – West Virginia American Water is pleased to announce an infrastructure upgrade project in Fayetteville. As part of our ongoing commitment to providing safe, reliable water service, the company will be investing approximately $580,000 in infrastructure improvements within the community.

This project began this week and includes replacing 1,920 feet of aging pipe with 8-inch PVC main. Construction will take place on Grace Street, with work extending from Maple Avenue to Frank Street. These upgrades will improve service reliability for customers by helping to reduce service disruptions.

Crews will work Monday through Friday between 8:00 a.m. and 4:00 p.m. and traffic restrictions will be in place during construction. Main replacement work is scheduled for completion by the end of March, and the final street restoration will be completed in the spring of 2025.

This infrastructure upgrade project is part of West Virginia American Water's plan to invest more than $97 million in infrastructure upgrades across the state in 2024. In addition, these projects help support the economic health of the communities served by West Virginia American Water. Economic impact studies show that for every $1 million invested in water infrastructure, upwards of 15 jobs are generated throughout local economies.

Over the past decade, West Virginia American Water has invested over $736 million, in infrastructure projects and capital upgrades to address aging infrastructure across the Mountain State, including more than 168 miles of new water main. To learn more about our ongoing investment in infrastructure, visit the company's interactive upgrade map.

During construction, customers may experience temporary service interruptions, discolored water, and/or lower than normal water pressure. Crews will work as quickly as possible to shorten the length of these temporary inconveniences. To report water related emergencies such as leaks, main breaks or other service disruptions, customers can submit a service request on the company's website.
