

Virginia American Water Announces Upcoming Annual Hydrant Flushing in Waverly

Alexandria, VA – May 23, 2025 – Virginia American Water will begin its annual fire hydrant flushing program starting on Monday, May 26.

This work is an essential part of our system maintenance program and is necessary for customers to continue to receive high-quality water service. Flushing the system helps to clean out any buildup of mineral deposits and sediment inside the pipes.

The company also flushes its fire hydrants to confirm they are operational and to check fire flows in the system. The process of flushing involves simultaneously opening fire hydrants in a specific area to create increased water flows.

Tips for Customers During Hydrant Flushing

If customers experience temporary water discoloration, Virginia American Water recommends running the cold water until it is clear. The following steps are also encouraged:

- Store a large bottle of water in the refrigerator for drinking.
- Check for discolored water before using the washing machine or dishwasher.
- If water pressure or water volume seems low after flushing has been completed, check faucet screens for trapped particles.
- Watch for flushing crews -Please use caution when driving through an area where crews are working.
