# American Water Participates in Source Water Protection Week

CAMDEN, N.J. – SEPTEMBER 29, 2025 – American Water (NYSE: AWK), the largest regulated water and wastewater utility company in the U.S., today announced its participation in American Water Works Association's (AWWA) annual Source Water Protection Week, September 28 - October 4, 2025.

"Providing safe, reliable drinking water starts with protecting our water sources," said Lynda DiMenna, Vice President, Environmental Policy, Research & Planning, American Water. "Preventing pollution in rivers, lakes, and groundwater contributes to maintaining water safety and reducing treatment expenses. Throughout Source Water Protection Week and beyond, American Water continues to educate employees and customers across its national footprint about the steps it takes to provide safe, clean, reliable and affordable water services to communities served."

American Water is committed to providing high-quality drinking water while also prioritizing source water protection, which includes:

- Conducting nearly 1 million tests and measurements each year at American Water state-of-the-art research laboratories.
- Application of the most advanced technology, equipment, and filtration processes.
- Constant collaborative work with the U.S. Environmental Protection Agency (EPA) and other state and local agencies to meet or surpass water quality standards and address emerging contaminants so that potential impacts to water quality are minimized.

During Source Water Protection Week, we encourage individuals to take the following actions and incorporate them into year-round practices:

- Plant landscaping around homes or businesses with more permeable surfaces, such as mulch, that allow water to soak into the ground. Try to limit concrete and asphalt, which contribute to runoff.
- Use native plants that require minimal fertilizer, herbicides and watering.
- Do not over-apply chemicals to plants and avoid application immediately before it rains.
- Plant a rain garden that uses native plants and grasses to capture and absorb rainwater from rooftops and roads. These planned gardens help simplify lawn maintenance, control erosion and reduce runoff into streams and storm water systems.
- Keep litter, pet waste and yard waste out of streets and storm drains. Pet waste contains bacteria that can find its way into waterways through runoff.
- Select non-toxic or less toxic alternatives to typical household products, such as cleaning agents.
- Dispose of pharmaceuticals by taking them to collection sites, where available. Don't flush them down the toilet!
- Use hazardous waste collection sites and services to dispose of items such as chemicals, paints, motor oil and batteries.
- Report any hazardous material spills, illegal dumping or suspicious activity to local or state authorities.
