Pennsylvania American Water Announces $2 Million in Water Line Upgrades in Dauphin and Lebanon Counties

Projects to replace approximately 7,500 feet of main throughout several municipalities

MECHANICSBURG, Pa. (Dec. 15, 2025) – Pennsylvania American Water today announced that more than $2 million in system investments were made to replace over approximately 7,500 feet of aging water main, some dating back to the 1920s, in Annville and Derry townships and Steelton Borough. These upgrades will enhance customer reliability, reduce service disruptions, and improve firefighting water flow.

“Upgrading aging water mains is an important part of helping our customers continue to receive safe, reliable water service,” said Joseph Woodard, senior director of operations for Pennsylvania American Water. “These proactive investments reduce the risk of main breaks, strengthen system reliability and support the long-term needs of our communities.”

In Steelton Borough, the company recently finished installing new large-diameter ductile iron pipe, replacing more than 4,200 feet of aging water mains in the following areas:

- Swatara Street
- Eleanor Street
- Franklin Street
- Steelton High School

Earlier this fall, the company undertook pipe replacement projects along several streets in Annville and Derry townships in the following areas:

- East High Street
- Elm Street
- Locust Street
- Reese Avenue
- Wilson Avenue

All of the projects have been put into service and are actively benefiting customers. More information on Pennsylvania American Water’s statewide infrastructure investment efforts can be found at pennsylvaniaamwater.com/infrastructure.

These infrastructure upgrade projects are not only an important investment in public health and safety, but they also help support the economic vitality of the community. Economic impact studies show that for every $1 million invested in water infrastructure, upwards of 15 jobs are generated throughout the economy. Statewide, Pennsylvania American Water invested approximately $675 million in 2024 alone to improve its water and wastewater treatment and pipeline systems, supporting more than 10,125 jobs through these continued investments.
