

## New Jersey American Water to Upgrade Cherry Hill Water Infrastructure with \$2.5 Million Investment

**CAMDEN, N.J. – Feb. 2, 2026** – New Jersey American Water is investing approximately \$2.5 million to upgrade critical water infrastructure in Cherry Hill, replacing nearly a mile of aging water main to help ensure continued reliability, water quality, and fire protection for local customers. The project will replace an older cement water main with a new 16-inch ductile iron main along Kresson Road between Springdale Road and Cropwell Road.

This investment is part of the company's ongoing, [multi-year commitment](#) to strengthen water infrastructure in more than 100 communities across New Jersey, supporting reliable service and consistent water quality over time. By making planned investments in infrastructure, New Jersey American Water helps reduce the likelihood of service interruptions, improves water flows for homes and businesses, and supports dependable fire protection for the community. These improvements are designed to deliver long-term value by reinforcing the system customers rely on every day.

Construction is already underway and is expected to be completed by June 2026. Crews will typically work Monday through Friday from 8 a.m. to 4 p.m., with the possibility of evening and weekend work if needed to maintain the project schedule. Access to homes and businesses will be maintained throughout construction, and crews will work directly with customers to accommodate driveway access as needed.

In areas where excavation is required, temporary surface restoration will be provided. Permanent restoration will be completed, weather permitting, approximately 90 days later to allow time for the soil to properly settle.

Work will be performed by local, qualified contractor Pioneer Pipe Contractors, Inc., with traffic control coordinated in partnership with local authorities. Motorists are advised to use caution near work zones, follow posted signage, and expect some construction related noise during active work hours. Emergency vehicles and local access will be maintained at all times. Daily site cleanup will occur, and driveway, sidewalk, and landscaping restoration will be completed upon project conclusion.
