West Virginia American Water Announces $550,000 Infrastructure Project in Fayetteville

CHARLESTON, W.Va., April 16, 2026 /PRNewswire/ -- West Virginia American Water is pleased to announce a $550,000 infrastructure upgrade project on E. Maple Avenue in Fayetteville.

"We are committed to continued investment in our infrastructure systems across the state," said **Scott Wyman, President of West Virginia American Water**. "This project will benefit the Fayetteville community and customers we serve and will allow us to continue providing safe, clean, reliable and affordable water to the community."

The project entails replacing 1,020 feet of aging pipe with 6-inch PVC main and will occur on E. Maple Avenue from Huse Street to Ankrom Street. It is scheduled to be completed by the end of June, and the final street restoration will be completed in the summer of 2026.

This infrastructure upgrade project is part of West Virginia American Water's plan to invest more than $134 million in continued infrastructure upgrades across the state in 2026, supporting the economic health of communities across the company's service area. Economic impact studies show that for every $1 million invested in water infrastructure, 10 jobs are generated throughout local economies.

Over the past decade, West Virginia American Water has invested over $805 million in infrastructure projects and capital upgrades to address aging infrastructure across the Mountain State, including more than 168 miles of new water main. To learn more about these ongoing investments, visit the company's interactive upgrade map.

During construction, crews will work Monday through Friday between 7:00 a.m. and 5:00 p.m. Traffic restrictions will be in place for the duration of the project. Additionally, customers may experience temporary service interruptions, discolored water, and/or lower than normal water pressure. Crews will work as quickly as possible to shorten the length of these temporary inconveniences. To report water related emergencies such as leaks, main breaks or other service disruptions, customers can submit a service request on the company's website.
