Pennsylvania American Water Announces Service Line Identification Outreach

Door-to-door outreach underway in the Milton area

MECHANICSBURG, Pa. (June 16, 2026) – Pennsylvania American Water today announced door-to-door canvassing outreach throughout its Milton service area to assist nearly 13,000 customers in 16 municipalities in identifying the material of their home's water service line. This outreach is currently underway in Milton and Lewisburg boroughs. Once complete, efforts will continue in other areas served by the company's system in Northumberland and Union counties, including:

- McEwensville Borough
- Northumberland Borough
- Watsontown Borough
- Delaware Township
- East Chillesquaque Township
- Point Township
- Turbot Township
- Upper Augusta Township
- West Chillesquaque Township
- Buffalo Township
- East Buffalo Township
- Gregg Township
- Kelly Township
- White Deer Township

"Customer involvement makes this work possible," said Pennsylvania American Water Vice President of Operations Jim Runzer. "Our goal is to catalog the material type of customers' service lines to help safeguard the quality of water for our customers."

A water service line is a pipe that connects a home or business to the water main in the street.

Pennsylvania American Water owns a portion of the service line, typically from the main to the curb stop, found near the street curb or sidewalk. The property owner owns the rest of the service line (from curb stop) all the way into the house or building being served, which is why customer participation in this program is important.

If a service line is identified as lead or galvanized steel, Pennsylvania American Water will work with the customer to replace the line at no direct cost to them. In Northumberland and Union counties, approximately 6,500 water service lines are not yet identified.

The door-to-door outreach will be conducted by CDM Smith, Pennsylvania American Water's service line Inventory contractor. All representatives will carry official company photo I.D. badges and wear logoed, high-visibility vests. Canvassing in the area is expected to be completed in the fall.

The outreach efforts are part of the company's lead service line replacement program, supporting the U.S. Environmental Protection Agency's Lead and Copper Rule Improvements, which require all water utilities to identify and make public the materials that both company-owned and customer-owned service lines are made of to address and minimize exposure of lead in drinking water.

Since the lead service line identification project began, more than 50,000 service lines have been identified statewide, and more than 3,400 customer-owned lead lines have been replaced.

Customers can view an interactive service line map at pennsylvaniaamwater.com/LeadFacts, self-report their service line material online, or request assistance by calling 717-581-8599, emailing LeadFreePA@amwater.com

or scheduling an appointment at calendly.com/LeadFreePA.
