

Kentucky American Water Upgrading Water Infrastructure in Maddoxtown Area of Fayette County

Lexington, Ky. (October 2, 2026) – Kentucky American Water is investing approximately \$1.8 million to upgrade critical water infrastructure in the Maddoxtown area of Fayette County.

The project includes replacing 9,350 feet of 3-inch- and 4-inch-diameter water main installed in the 1950s with 4-inch-, 6-inch- and 8-inch-diameter ductile iron main on Huffman Mill Pike from 4101 Huffman Mill Pike to Russell Cave Road.

This investment is part of the company's ongoing commitment to strengthening water infrastructure to support reliable service and consistent water quality for customers. Planned infrastructure investments help reduce the likelihood of service interruption and improve water flow for homes and businesses. The improvements are designed to deliver long-term value by reinforcing the system customers rely on every day.

Construction on this project is expected to begin in October. Crews will typically work Monday through Friday from 8 a.m. to 6 p.m. Access to homes and businesses will be maintained throughout construction, and crews will work directly with customers to accommodate driveway access as needed.

In areas where excavation is required, temporary surface restoration will be provided. Permanent restoration will be completed once the soil has settled and weather conditions permit.

Work will be performed by Clark and Sons Contracting, with traffic control coordinated in partnership with local authorities. Motorists are advised to use caution near work zones, follow posted signage and expect some construction-related noise during active work hours. Emergency vehicle and local access will be maintained at all times. Daily site cleanup will occur, and driveway, sidewalk and landscaping restoration will be completed upon project conclusion.
