West Virginia American Water Announces $700,000 Infrastructure Project in Glen Jean

CHARLESTON, W.Va., Nov. 3, 2026 /PRNewswire/ -- West Virginia American Water is pleased to announce a $700,000 infrastructure investment project on McKell Avenue in Glen Jean.

"Investing in our infrastructure is an investment in the communities we serve," said **Scott Wyman, President of West Virginia American Water.** "This $700,000 project on McKell Avenue will replace aging infrastructure and strengthen our system so we can continue providing clean, reliable water to our customers in Glen Jean for years to come."

The project will replace 3,740 feet of aging pipe with 6-inch PVC main and 2-inch PVC main. Crews will be working on McKell Avenue, from Main Street to Collins Hill Road, and also includes work on Pearl Street and Holcomb Street. Work began the week of October 12 and is scheduled to be completed by the end of April 2027. Final street restoration will be completed in spring 2027. Work will occur Monday through Friday between 7:30 a.m. and 5:00 p.m., and traffic restrictions will be in place for the duration of the project.

This infrastructure upgrade project is part of West Virginia American Water's plan to invest more than $129 million in ongoing infrastructure upgrades across the state in 2026, supporting the economic health of communities across the company's service area. Economic impact studies show that for every $1 million invested in water infrastructure, upwards of 10 jobs are generated throughout local economies.

Over the past decade, West Virginia American Water has invested over $805 million in infrastructure projects and capital upgrades to address aging infrastructure across the Mountain State, including more than 168 miles of new water main. To learn more about these ongoing investments, visit the company's interactive upgrade map.

During construction, customers may experience temporary service interruptions, discolored water, and/or lower than normal water pressure. Crews will work as quickly as possible to shorten the length of these temporary inconveniences. To report water related emergencies such as leaks, main breaks or other service disruptions, customers can submit a service request on the company's website.
