West Virginia American Water Announces $850,000 Infrastructure Investment Project on Old Route 38

CHARLESTON, W.Va., Nov. 4, 2026 /PRNewswire/ -- West Virginia American Water is pleased to announce an $850,000 infrastructure investment project on Old Route 38 in Fayetteville.

"We are committed to providing safe, clean and reliable water to our customers," **said Scott Wyman, President of West Virginia American Water.** "Investing in our infrastructure helps us continue providing water service to our customers and helps reduce future service disruptions through proactive investment and replacement projects like this one on Old Route 38."

The project will replace 3,500 feet of aging pipe with 8-inch PVC main and 2-inch PVC main. Work began the week of October 26 with crews working on Old Route 38, from Beckwith Road to Goose Creek Road, and Harding Subdivision Road. The project is scheduled to be completed by the end of February 2027, and the final street restoration will be completed in spring 2027. Work will occur Monday through Friday between 7:30 a.m. and 5:00 p.m., and traffic restrictions will be in place for the duration of the project.

This infrastructure upgrade project is part of West Virginia American Water's plan to invest more than $129 million in ongoing infrastructure upgrades across the state in 2026, supporting the economic health of communities across the company's service area. Economic impact studies show that for every $1 million invested in water infrastructure, upwards of 10 jobs are generated throughout local economies.

Over the past decade, West Virginia American Water has invested over $805 million in infrastructure projects and capital upgrades to address aging infrastructure across the Mountain State, including more than 168 miles of new water main. To learn more about these ongoing investments, visit the company's interactive upgrade map.

During construction, customers may experience temporary service interruptions, discolored water, and/or lower than normal water pressure. Crews will work as quickly as possible to shorten the length of these temporary inconveniences. To report water related emergencies such as leaks, main breaks or other service disruptions, customers can submit a service request on the company's website.
